

— Safer Roads Through Intelligent Infrastructure

Advanced Warning Of Oncoming Cyclists

— Making cities smarter and safer

About us

.....

We provide municipalities with the data needed to make cities safer and smarter. Our intelligent warning systems give motorists and vulnerable road users (cyclists and pedestrians) the time they need to act and be safe. By utilizing TheSmartCone™ modular platform with the latest sensors and IoT technology, we offer an advanced monitoring and threat detection system with real time visual and audio alerts to work towards Vision Zero.

BIKE LANES

With Near Miss Reporting

.....

Intersections are the most vulnerable points for cyclists. AutoGuardian places high visibility torches leading up to an intersection which light up automatically when the cyclists enter into a monitored zone. This brings advanced visual awareness of fast approaching cyclists to motorists as they enter an intersection with the intent to turn and cross over a bike lane.

Intelligent Lanes

- High Visibility Flashing Lights
- Impact Resistant Bollards
- Easy To Deploy
- Cost Effective
- Multi Use Solution
